

SmartWan

Deliver Network Intelligence
for business innovation

SDN

SmartWan is a software defined network (SDN) application designed to optimize wide area networks (WAN) making it more valuable for business and to reduce configuration complexity for IT staff. Through an intuitive interface, it enables to map the network infrastructure, identify traffic profiles based on business priorities and dynamic reorganize network configurations based on applications polices without complex changes processes. Reduce technical barriers to leverage WAN infrastructure and make your IT resources more valuable to your business with MT4 SDN SmartWan.

MT4 SDN Stack

Abstracts networks devices to mask complexity. Treat network as a System.

WLOG

High Performance Whale Syslog Server
Gather, index and store your syslog data with high performance without network packet loss.
Automatically recognize patterns and send alerts to network operation staff.

LBC

Network Load Balance Center
Manage all your load balancers devices easily in one single multivendor front end.
Increase network availability and operational performance.

NAC

Network Audit Center
Automatically audit all your network configuration changes to find out malicious attempts from technical analysts.

SDN

SmartWan
Make your WAN infrastructure more valuable to your business.
Quickly change network configurations to adapt your resources to your business demands. Optimize WAN costs based on policies.

TOC

Topology Center
Store, index and manage all your networks topology visio files in on single repository.
Reduce network troubleshoot time and increase business view of infrastructure.

Password Vault

Securely store and manage all your network devices passwords to ensure safe privileged access to your network resources.

ABOUT MT4

MT4 is a Brazilian Network Application developer whose expertise comes from complex network environments projects. The company has been helping customers for 13 years in situations that involve Load Balance, Security Information, Syslog Project, Topology, Software Defined Network and other complex situations. Fully oriented to innovation, MT4 has the skill to convey business language to the network environment and the other way around. For more access www.mt4networks.com/en/
